President’s Message

Dear WMSHP Members,

We are excited to announce our Spring 2017 event entitled “Breaking Ground: Enhancing Clinical Knowledge in Pharmacotherapeutics”! This event will feature topics which include: Infectious Diseases, Cardiology, Critical Care, Alternative Medicine, Compounding, and Policy. This event will take place on Sunday May 21st starting at 7:00am at Holy Cross Hospital in Silver Spring, MD.

This year’s keynote speaker is none other than Dr. Glenn Wortmann, MD - Section Chief of Infectious Diseases and the Chair of Infection Control Committee at Medstar Washington Hospital Center. In addition, we will also feature: Dr. Harish Jarett, MD - speaking on current updates in cardiopulmonary therapeutics, Dr. Muideen Adigun, PharmD - delving into one of his favorite pharmcotherapeutic topics of advanced medicine, Dr. Pia Puatrakul, PharmD - offering a unique perspective on alternative medicine, Dr. Vaiyapuri Subramaniam, PharmD - to deliver comments on updates in USP 797 Compounding, and Dr. Cristina Klafehn, PharmD - to speak on the fascinating topic of the FDA’s “Medwatch”.

In addition to our amazing speaker’s line-up, we will also have our wonderful Industry Representatives discussing information about their products. Furthermore, raffle tickets will be handed out to everyone who stops by their respective booths. Breakfast and Lunch will be included to all who attend. Please mark the date on your calendar and look out for registration information later next month (see website for additional details).

Warm regards and best wishes,

Justin Sebakijje, PharmD, BCPS
President, WMSHP
Clinical Capsule

Options in the Management of Sickle Cell Disease
Porscha L. Johnson, PharmD
Fredric A. Lombardo, PharmD, MS, BCOP
Clarence D. Moore, PharmD, BCPS

ABSTRACT: Sickle cell disease (SCD), a hereditary blood disorder that causes the body to produce abnormal sickle hemoglobin (HbS), has become the driving force for a series of resultant medical complications. Such clinical manifestations include anemia via hemolysis, iron overload secondary to repeated blood transfusions, bacterial infections, pulmonary complications, vascular occlusion, and episodic pain crises. Preventative therapy most commonly consists of hydroxyurea, routine vaccinations, and prophylactic antibiotics. However, iron chelation therapy and pain management are considered mainstay treatment options as the disease persists. Because SCD can drastically reduce quality of life and life expectancy, it is vital that the pharmacist plays a fundamental role in providing an optimal treatment and management plan for each individual patient combating this disease.
